Digital Communication

RS 485 standard, communication capability using open Modbus RTU protocol. The meters can be multi-dropped using RS 485 twisted pair. The baud rate can be set from 1200 bps to 19200 bps. (Preferred settings is 9600 bps.) RS 485 Half duplex isolated serial channel connection.

BMS Compatible

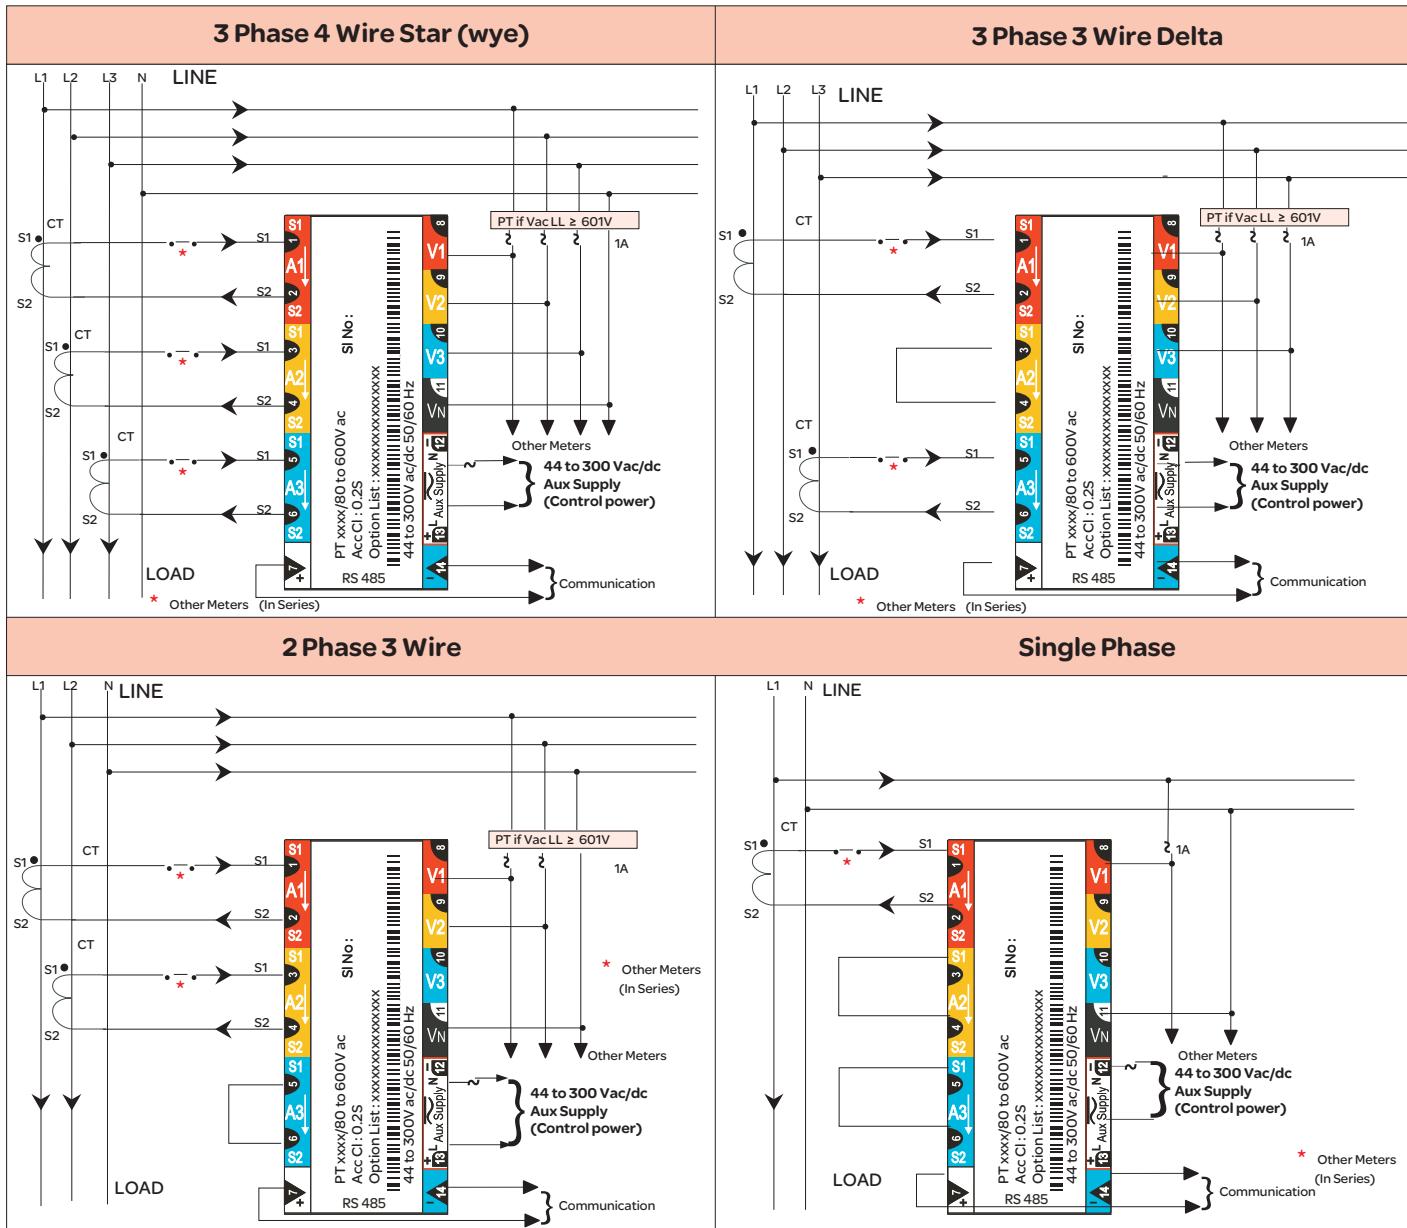

Access of either single (individual) parameter or block of parameters through RS 485 communication port. Integrates with Honeywell, Siemens Building Technologies and other BMS packages.

RS 485 Multi-Point Communication Modbus

Wiring Diagram

"3d" VA measurement

- EM 6400, EM 6433, EM 6436 is equipped with "3d VA Measurement" capability. This accurately include Distortion power (D) per IEEE 100, into the VA Calcution

$$\text{So, } \text{VA}_{3d} = \sqrt{W^2 + VAR^2 + D^2}$$

- However Arithematic VA=VA1+VA2+VA3 is also available as a set-up option

Demand Parameters Optional (for EM 6400 only)

- Monitors Demand - Present, Rising & Maximum, Time remaining
- VA or W or A demand is selectable through setupable
- User selectable demand interval through set up in steps of 5 minutes(5,10,15,20,25&30)
- Demand may be Sliding window (auto) or Fixed window (User), selectable through setup mode
- The time of occurrence for the Maximum Demand is based on "ON hrs" of the system
- Maximum Demand can be cleared independently or along with the integrators through the CLR function
